

JDBC Setup Instructions

1. On the server, go to the Pervasive Control Center and create a database pointing to your company subfolder under the EVOERP or DBAMFG folder. If you have multiple companies, create a database for each company. Highlight the server name and select New Database.

Next, confirm the server and click Next, then give the database a name and set the location to the company folder. Starting with Pervasive (Zen) 15 the Long metadata box is checked by default and needs to be unchecked.

Click Finish.

- 2. If you are using Pervasive V9 or older, go to your PVSW\BIN folder and copy the files JPSCS.JAR, PVJDBC2.JAR and PVJDBC2X.JAR to the LIB folder under DBAMFG or EVOERP as applicable.
- 3. In Evo, go to SM-T. Enter the Server name or IP Address as the host, Port 1583 (unless you have changed the default Pervasive port which would be unusual), and database name would be the database defined in step 1 for the company. The destination is the folder you want output reports and graphs to be saved to.

4. Click Save, then Test Settings. If the connection is good, you will see a query result displaying your first 10 item numbers so you can confirm you are looking at the correct company data.

Java Settings ·	Please verify t	latabase connection has been hat these are the first 10 item:) are intending to connect to,	
	Item	Description	On Hand
	*	NON-STOCK ITEM	0.0
Host	1000	DESK, OFFICE	0.0
	1005	DESK FRAME ASSEMBLY	15.0
Port	1005-1	LEFT BRACE ASSY	0.0
Name	1005-2	RIGHT BRACE ASSY	0.0
	1005-3	CENTER BRACE ASSY	0.0
Destinat	1006	DESKLEG	-56.0
	1006-1	CASTER	2085.0
	1100	DESKTOP	0.0
	1105	DESKTOP, 4 X 5	12.0

If the connection is not good, you will get a message that the connection was unsuccessful with an option to view an error report. If you are unable to resolve the problem after reviewing the error report, paste it into an email and send to support@istechsupport.com and we will assist you.
